choosing the right **1.50 GPM -- >**  
**lower-flow** showerhead

The **evolve™ Roadrunner** is a unique and special showerhead with a twist...make that, with a pull. What separates this beautiful shower unit from anything else on the market is its **patented ShowerStart™ technology**.

Most people turn on the shower and then go do something else while it warms up. This can cause a lot of wasted water, and the energy required to heat it.

**ShowerStart™** has a built-in sensor that **automatically reduces the water flow to a trickle once it has reached the set temperature** - about 95°F. When you are ready to shower, simply pull the Roadrunner's chain...and voila!

**1.50 GPM**  
 w / **ShowerStart™ technology**

This attractive **non-clogging** showerhead is made with **solid brass fittings** to provide a life time of showering enjoyment. Installing a new showerhead is one of the simplest and least expensive ways to "go green". Best of all, the benefits go beyond doing your part to save our environment; you'll also be helping your pocket book by **lowering monthly water and energy bills**.

But, before running off to the hardware store, we suggest doing a little research. There are a myriad of lower flow showerheads available today, but they achieve their results in different ways. Each of the different "saving" attributes has trade-offs that can impact not only how much you save, but also how much you continue to enjoy your daily shower. Chose right, and using a lower-flow showerhead will be a surprisingly pleasant experience.

Taking the following factors into consideration when making your decision on which showerhead to purchase will get you off to a great start each and every day.

- **Flow Rate:** 1.75 GPM to 1.5 GPM is optimal for balancing savings and comfort (Roadrunner is 1.50 GPM)
- **Spray Strength:** a showerhead with a pressure compensating flow regulator ensures spray consistency
- **Spray Feel:** a non-aerated showerhead minimizes the likelihood of accidental energy waste
- **Spray Coverage:** a "full" spray pattern ensures maximum warmth and comfort

**Add to these great features the benefit of ShowerStart™, a lower flow rate of 1.50 GPM, enclosed in an attractive package, and you have found the perfect showerhead**

**That's the evolve™ Roadrunner!**

**evolve™ to a new shower experience today!**
